

Elevating EHR Billing Efficiency

Streamlined Billing Code Management

The HL7 DFT (Detailed Financial Transaction) Interface is a powerful addition to AS Software's ultrasound automation platform designed to enhance billing efficiency for EHR systems. The interface streamlines the billing process by automatically capturing and forwarding details from the ultrasound study. The user selects the order within the AS application, eliminating the need to manually create the order in the EHR. This on-the-fly functionality saves time, reduces human error, and simplifies charge reconciliation.

Features

- **CPT and ICD-10 Code Automation:** Accurate billing through real-time capture of CPT and ICD-10 codes from ultrasound examinations.
- **Direct Charge Routing:** Detailed financial transactions are sent effortlessly to the EHR's Charge Router.
- **Flexible Order Management:** Easily add new procedures without modifying existing orders.
- **Integrated Charge Satisfaction:** Automatically synchronizes charges within the EHR, making AS the billing reference point.
- **Charge Review:** Automated queues flag charges for billers' review, streamlining validation and discrepancy resolution.
- **Charge Reconciliation:** Enhances end-of-month reconciliation, cutting down on administrative tasks.

How It Works

Service Completion

Once a service is rendered, relevant billing codes are captured in real-time within the AS platform based on clinical documentation.

Seamless Transmission

The DFT Interface seamlessly passes the captured codes to the EHR's billing system via an HL7 DFT feed.

Charge Automation

Charges are auto-populated and verified within the EHR, ensuring that all billable procedures are accounted for.

Data Exchange

Detailed billing information is sent from the Department System Scheduler (DSS)/ Order Filler to the Charge Processor for immediate action.

Benefits

-  **Billing Accuracy:** Automated processes minimize missed charges and discrepancies.
-  **Operational Efficiency:** Reduce the time between service delivery to charge capture.
-  **Time Savings:** Enables real-time order input within the AS application for immediate processing, reducing the need for dual entry of ad hoc orders into the EHR.
-  **Financial Optimization:** Ensure all services rendered are billed appropriately, maximizing revenue potential.
-  **Compliance Assurance:** Maintain high levels of compliance with updated billing codes and regulations.

The AS Software Advantage

Leveraging over three decades of innovation in ultrasound automation, AS Software's HL7 DFT Interface is integral to our outbound billing and charge capture capabilities. It strengthens our cloud-based ultrasound reporting and image management suite, empowering healthcare practices to improve the speed and accuracy of charge capture, leading to increased revenue and reduced administrative burdens. The interface's ability to work with any EHR system that supports HL7 standards makes it a versatile solution for any healthcare organization.

Elevate Your Billing Process Today

Unlock the potential for streamlined billing and optimized financial performance with AS Software.
